

Belgium 

CO2logic (Headquarters based in Brussels (B), with a subsidiary in Amsterdam (NL)) is an international & independent climate advisory organisation.

CO2logic is specialised in calculating, reducing and offsetting of CO2 emissions. It helps organisations in their transition to the low carbon & added value economy. Today many organisations use CO2logic's services to help them reduce their climate impact and their energy costs while giving them significant competitive advantages. We bring credibility to Corporate Responsibility claims through high quality advisory services.

CO2logic also supports & develops climate projects in developing countries (including Burkina Faso, Benin and Senegal) in partnership with local NGO's in order to help offset our clients' and partners' incompressible carbon footprint. The CO2 Neutral label ensures that organisations take responsibility for the remaining emissions and climate impact ([www.co2-neutral-label.org](http://www.co2-neutral-label.org) [1]).
